

**ULTRA ZINC PRIMER (55 LB. BOX)
W3762035**

Ultra Zinc Primer is a zinc-rich, high-durability epoxy-based coating designed to give a smooth, long-lasting finish. This powder coating creates a tough, resilient layer that excels in protecting surfaces from corrosion and chemicals. This coating has superior transfer efficiency, powder flow, and powder adhesion compared to standard zinc-rich primers. This powder has excellent corrosion protection and low cure capabilities (cures at 300°F). Not for use on aluminum.

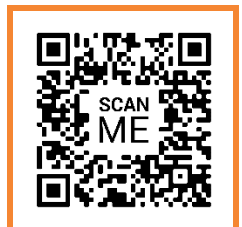

Adding a priming step to your process can help defeat problems with adhesion, poor surface quality, uneven surfaces, and orange peel.

FEATURES:

- Smooth finish with excellent coverage
- Mid-high gloss finish (60+%)
- Great durability and toughness
- Excellent resistance against corrosion and chemicals
- Superior transfer efficiency, powder flow, and powder adhesion
- Salt Spray: 2000 hours pass
- Humidity Resistance: 1000 hours pass
- Recommended Bake: 10 Minutes @ 300°F Metal Temperature

APPLICATIONS:

- Steel wheels (other than aluminum)
- Gas tanks
- Engine components (other than headers)
- Motorcycle/bike frames
- Appliance fixtures
- Farm/Agricultural equipment
- Furniture
- Industrial parts (handrails, posts, etc.)
- And more
